Technologies and Skills

- **Programming Languages:** Java (21), JavaScript, TypeScript, HTML, CSS, SQL, C#, Python, PowerShell
- **Frameworks & Libraries:** Spring Boot, Spring Cloud (Gateway, Eureka, OpenFeign), Spring Security (JWT), Spring Data JPA, React, React Router, Vite, Tailwind CSS, Bootstrap, ASP.NET Core Web API, Flutter
- **Technologies:** WordPress, REST APIs, Microservices, Microsoft Azure (App Service, Application Insights), Docker, Kubernetes, RabbitMQ, Swagger/OpenAPI
- **Databases:** PostgreSQL, MySQL, SQLite
- **Tools:** Git, GitHub, GitHub Actions (CI/CD), JUnit, Postman, Maven, Docker Compose, IntelliJ IDEA, VS Code, Visual Studio, Visual Paradigm (UML)
- **Spoken Languages:** English (Fluent), Spanish (Fluent)

Education and Certifications

- Advanced Diploma, Computer Programming and Analysis, Conestoga College, Waterloo 2023 – 2026
- OSSD, High School Diploma, Lakeshore Catholic High School, Port Colborne 2019 – 2023

Education Details, Technical Highlights and Achievements

- 2nd Place, 2026 Capstone Demo Day, Conestoga College, co-hosted with IEEE KW Computer Society: recognized for SwiftMove, a moving platform app that lets users find rides and compare rates.
- 3 years of hands-on experience collaborating with classmates in team-based environments to design and develop small- to medium-scale applications.
- Applied Agile and Waterfall methodologies, including planning, sprints and documentation workflows.
- Worked with Git feature branches and pull requests on team projects, reviewing teammates' code before merging.

Work Experience

Software Dev **Jack in the Booth - Web** **Aug 2026 – Present**
Freelance Fort Erie, ON

- Independently designed and built a full-stack booking platform for a photobooth company, owning 100% of frontend and backend development, from architecture to deployment.
- Developed the backend with Spring Boot (Java 21) using a layered architecture (models, repositories, DTOs, services, controllers), with rate limiting and conflict-safe booking on PostgreSQL.
- Built the frontend in React and React Router, delivering a booking interface used by live customers to schedule photobooth services, with an HTML email notification to the admin on each new booking.
- Deploy and maintain the application in production, handling live customer bookings, ongoing feature updates and bug fixes after launch.

WordPress Dev **WordPress Developer - Local Church** **Jun 2026 – Present**
Local organization Fort Erie, ON

- Manage and maintain a live WordPress website for a local organization, handling updates, plugin management and content changes.
- Serve as the sole technical point of contact, independently translating non-technical requests into website changes.
- Troubleshoot site issues, manage hosting and domain concerns, and keep the site up and secure.

Projects

Software Dev **SwiftMove - Moving Platform (Capstone)** **Jan 2026 – Present**
Full stack, 3-person team Waterloo, ON

- Engineered a microservice-based moving platform with Spring Boot (Java 21) and React in a 3-person team, enabling scalable client–driver matching; awarded 2nd place at Capstone Demo Day.
- Built role-based client and driver dashboards with React, TypeScript, Vite and Tailwind CSS, using React Query and an Axios client that attaches JWTs and signs users out on expired sessions.
- Designed the backend as 6 domain microservices behind a Spring Cloud Gateway, with Eureka service discovery, OpenFeign inter-service calls, RabbitMQ messaging and Spring Security JWT authentication on PostgreSQL.
- Wrote JUnit unit tests for the Spring Boot backend, and documented the architecture, endpoints, data model and security risks in the team's technical report.

Software Dev **Inventory Management API - Web** **Jan 2026 – Apr 2026**
Full stack, 3-person team Waterloo, ON

- Built an ASP.NET Core (.NET 10) inventory REST API in C# in a 3-person team, with 9 endpoints (CRUD, search, statistics, low-stock, daily analytics) on MySQL, documented with Swagger/OpenAPI.
- Automated deployment to Microsoft Azure App Service with a GitHub Actions CI/CD pipeline, and monitored requests, response times and trace logs with Azure Application Insights and KQL.
- Containerized the API with Docker and Docker Compose and deployed it to Kubernetes (Minikube) with 5 replicas and a NodePort service, demonstrating self-healing pod recovery.
- Built a C# console client and PowerShell test script to validate the endpoints locally, in Docker and on Azure.

Software Dev **Micro Service E-Commerce App - Web** **Dec 2025 – Jan 2026**
Full stack, 3-person team Waterloo, ON

- Built product and cart REST microservices with Spring Boot in a 3-person team, using Netflix Eureka service discovery and an API gateway, with CRUD endpoints for a 20-product shoe catalogue on PostgreSQL.
- Containerized the frontend and backend, published the images to Docker Hub, and deployed the full online store (frontend, backend and PostgreSQL) to Render.com as a course deployment.

Software Dev **Task Collab App - Web** **2025**
Backend team Waterloo, ON

- Led backend development, contributing 90% of the backend (ASP.NET, C#) and 20% of the frontend (React, HTML, CSS, Bootstrap), and delivered a fully functional backend on MySQL.
- Implemented real-time notifications across the application using SignalR hub pipelines.

Mobile Dev **Meditation App - Mobile** **Jan 2025 – Apr 2025**
Features team Waterloo, ON

- Implemented the "Sounds" and "Habit Tracker" features (100% ownership) and contributed about 30% to other app features, using Flutter, Dart and GitHub.
- Used Firebase and a local SQLite database for local and remote data syncing.

Software Design and Architecture

- Designed applications using layered, Clean and microservice architectures, applying SOLID principles and patterns such as MVC, Strategy, Factory and Observer.
- Modeled application architecture with UML (use case, class, sequence and communication diagrams) in Visual Paradigm to support collaborative design.
